

EIB SCP - SHUTTER CONTROL PLANT

Picture for reference only

This laboratory is designed for the study of the shutter control plant and to allow the student a practical training, based on the performance of guided experiments. Industrial type components are educationally adapted by using a modular panel system to permit the step by step assembling from the simplest circuit to the most complex system.

The configuration allows the performing of the following exercises:

- Shutter Control Plant

The manual includes practical exercises by using standard EIB components. Each experiment describe from the design and configuration to the commissioning of the system. At the same time, the student will be able to find important information with relevant terminologies required for the assembling of the Home Automation systems.
